

GCSE TOPIC BOOKLET ALGEBRAIC EXPRESSIONS

1. Sammy and Jack play snap with these algebra cards.

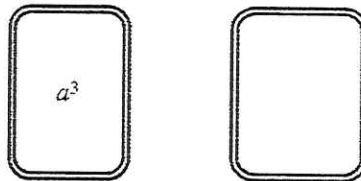

- (a) Draw lines to connect the pairs of cards that are equivalent.

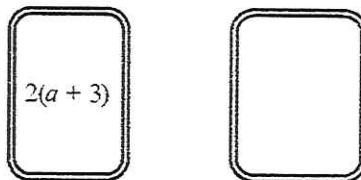

[4]

- (b) For each of the following cards, write another equivalent card.

(i)

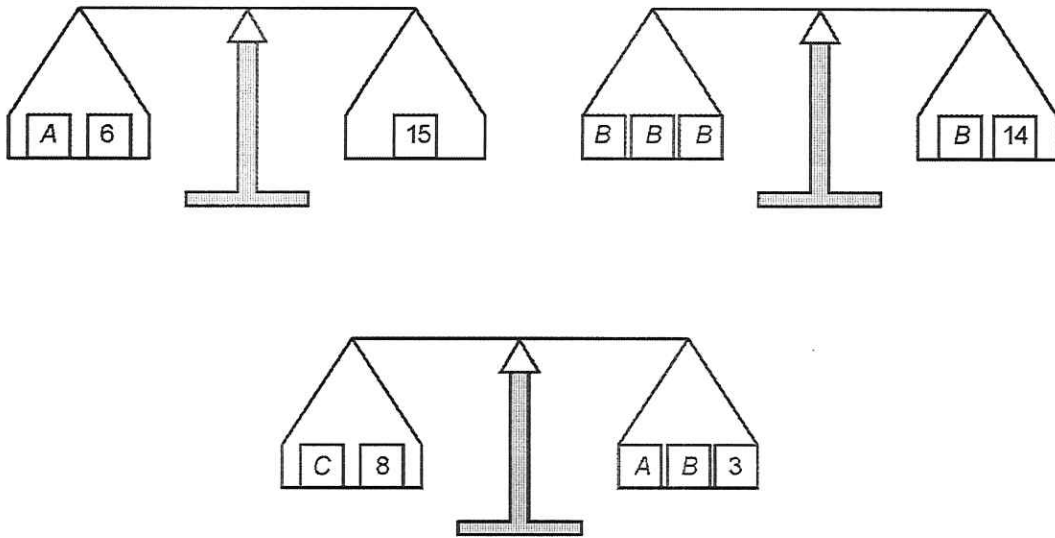

(ii)

[2]

2. Each diagram represents a balance with the total weight on each side being equal.
Find the values of A , B and C .

[5]

$A =$ $B =$ $C =$

3. Plates are sold in two different sized boxes, small and large. The small boxes each contain 6 plates and large boxes each contain 9 plates.

Richard has x small boxes each containing 6 plates.

- (a) Write down, in terms of x , the total number of plates there are in these boxes.

[1]

- (b) Richard has 7 more of the large boxes than he has of the small boxes. Write down, in terms of x , the number of large boxes he has.

[1]

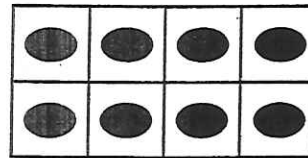

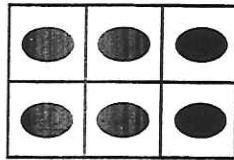

- (c) Write down, in terms of x , the total number of plates in the large boxes.

[1]

- (d) Write down, in terms of x , the total number of plates altogether. You must simplify your answer as far as possible.

[3]

4. A shopkeeper sells bars of chocolate in two different sizes. The small bar has 6 pieces of chocolate and the large bar has 8 pieces of chocolate, as illustrated in the following diagrams.

The shopkeeper has x small bars of chocolate.

- (a) Write down, in terms of x , the total number of pieces of chocolate in these x bars.

[1]

- (b) The number of large bars the shopkeeper has is 11 less than the number of small bars. Write down, in terms of x , the number of large bars he has.

[1]

- (c) Write down, in terms of x , the total number of pieces of chocolate in these large bars.

[1]

- (d) Write down, in terms of x , the total number of pieces of chocolate in all the bars. You must simplify your answer as far as possible.

5. Crayons are sold by a shop in two different sized boxes. Small boxes contain 4 crayons and large boxes contain 12 crayons.

The shopkeeper has x small boxes each containing 4 crayons.

- (a) Write down, in terms of x , the total number of crayons in these boxes.

[1]

- (b) The shopkeeper has 7 more of the large boxes than he has of the small boxes. Write down in terms of x , the number of large boxes he has.

[1]

- (c) Write down, in terms of x , the total number of crayons in the large boxes.

[1]

- (d) Write down, in terms of x , the total number of crayons altogether. You must simplify your answer as far as possible.

[3]

6. Alice buys two different magazines called *Goodbye* and *Welcome*. The *Goodbye* magazine costs £3 per copy and *Welcome* costs £4 per copy.

Over the past year Alice bought x copies of *Goodbye*.

- (a) Write down, in terms of x , the total cost (in pounds) of these copies.

[1]

- (b) Alice bought 5 more copies of *Welcome* than she bought of *Goodbye*. Write down, in terms of x , how many copies of *Welcome* she bought.

[1]

- (c) Write down, in terms of x , the total cost (in pounds) of these copies of *Welcome* magazine.

[1]

- (d) Write down, in terms of x , the total cost (in pounds) of all the magazines Alice bought. You must simplify your answer as far as possible.

7. Explain, using algebra, why the sum of any 3 consecutive whole numbers is always divisible by 3. [3]
