

Add together the whole numbers first. Then get a common denominator.

Example: $2\frac{1}{5} + 1\frac{1}{2} = 3 + \frac{2}{10} + \frac{5}{10} = 3\frac{7}{10}$

1. $2\frac{1}{3} + 1\frac{1}{2}$

9. $2\frac{3}{5} + 2\frac{1}{4} =$

2. $3\frac{1}{3} + 1\frac{1}{4}$

10. $2\frac{1}{2} + 1\frac{1}{7}$

3. $1\frac{1}{5} + 2\frac{1}{4}$

11. $1\frac{3}{7} + 1\frac{1}{2}$

4. $1\frac{2}{5} + 2\frac{1}{2}$

12. $3\frac{3}{5} + 1\frac{1}{3}$

5. $3\frac{1}{4} + 2\frac{2}{3}$

13. $1\frac{1}{5} + 2\frac{1}{6}$

6. $2\frac{1}{4} + 2\frac{2}{5}$

14. $3\frac{1}{10} + 2\frac{1}{3}$

7. $1\frac{2}{5} + 3\frac{1}{3}$

15. $1\frac{3}{10} + 3\frac{1}{3}$

8. $2\frac{1}{6} + 1\frac{1}{5}$

16. $1\frac{2}{5} + 4\frac{1}{7}$
