

Rules: Do the multiplication as if there were no decimal point. Put the point back in at the end.

Example: Work out **4.32 x 2**.
Pretend it is 432 x 2

$$\begin{array}{r} 432 \\ \times \quad 2 \\ \hline 864 \end{array}$$

Now there were two figures in the decimals in the question, so put them back.

$4.32 \times 2 = \mathbf{8.64}$
